PROJECTS

Final year project 1: ADVANCED TYRE PRESSURE AND TEMPERATURE MONITORING SYSTEM

This project aims to boost the performance and lifespan of air conditioners by tackling the pesky problem of dust buildup, which can seriously affect indoor air quality. By combining advanced filtration techniques with automated cleaning, this innovative solution promises to keep air conditioners running smoothly while also creating a healthier indoor environment.

Final year project 2: ADVANCED TYRE PRESSURE AND TEMPERATURE MONITORING SYSTEM

This project outlines the development of a Tyre Pressure and Temperature Monitoring System (TPMS) utilizing an ESP32 microcontroller and a BMP180 sensor. The system is designed to measure real-time atmospheric pressure and temperature, providing critical data that can enhance vehicle safety and performance.
